

Basics of Redirection (error handling)

- 1) Write a program in any language like C, C++, Java.
- 2) And redirect the output or error to a new file.

OR

- 3) Create a text file with some content like your name, address.
- 4) Redirect the content to a new file.

#### **#commands in terminal**

```
gedit content.txt
gedit redirect.sh
chmod +x redirect.sh
./redirect.sh
gedit out_file.txt
cat out_file.txt
```

#### **#commands in shell script**

```
#!/usr/bin/env bash

cat content.txt > out_file.txt
```

#### **#text file content.txt**
