

Environment Variable

1. How can you know what is the secondary command prompt set your system?
How can you change the secondary command prompt from the default to your username?

#commands in terminal

```
echo $PS2  
PS2="HELLO"  
echo $PS2
```

2. How can you ensure that the mv command (used for renaming a file) always asks for permission before overwriting an existing destination file?
[Hint: use alias command]

#commands in terminal

```
cat > hi  
mkdir hello  
mv -I hello hi
```
